Illinois Shines

Agenda

1 Introduction

2 Random Selection Process Overview

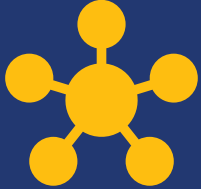

3 Project Selection

4 Next Steps

5 Questions and Answers

Introduction

Projects for the 2022-23 Program Year will be selected until the capacity for Group A (51.27 MW) and B (119.63 MW) is filled.

Random selection will be used to break tied scores. The entire scored project list for this exercise will be utilized.

A 20% developer cap will be applied and will reset for the 2023-24 Program Year.

Overview of Random Selection Process

- **Why use a command-line script to generate random tiebreaker numbers?**

- **How does the random number generator script work?**

Project Selection

Next Steps

Recording of this event will be up in the next 24 hours along with a communication of the results.

Selected projects will be submitted to the next 1-2 ICC meetings. The next meetings are June 15th and 29th.

The waitlist will be published to the Illinois Shines website on the Solar Project Categories page, under the Traditional Community Solar section.

Next Steps

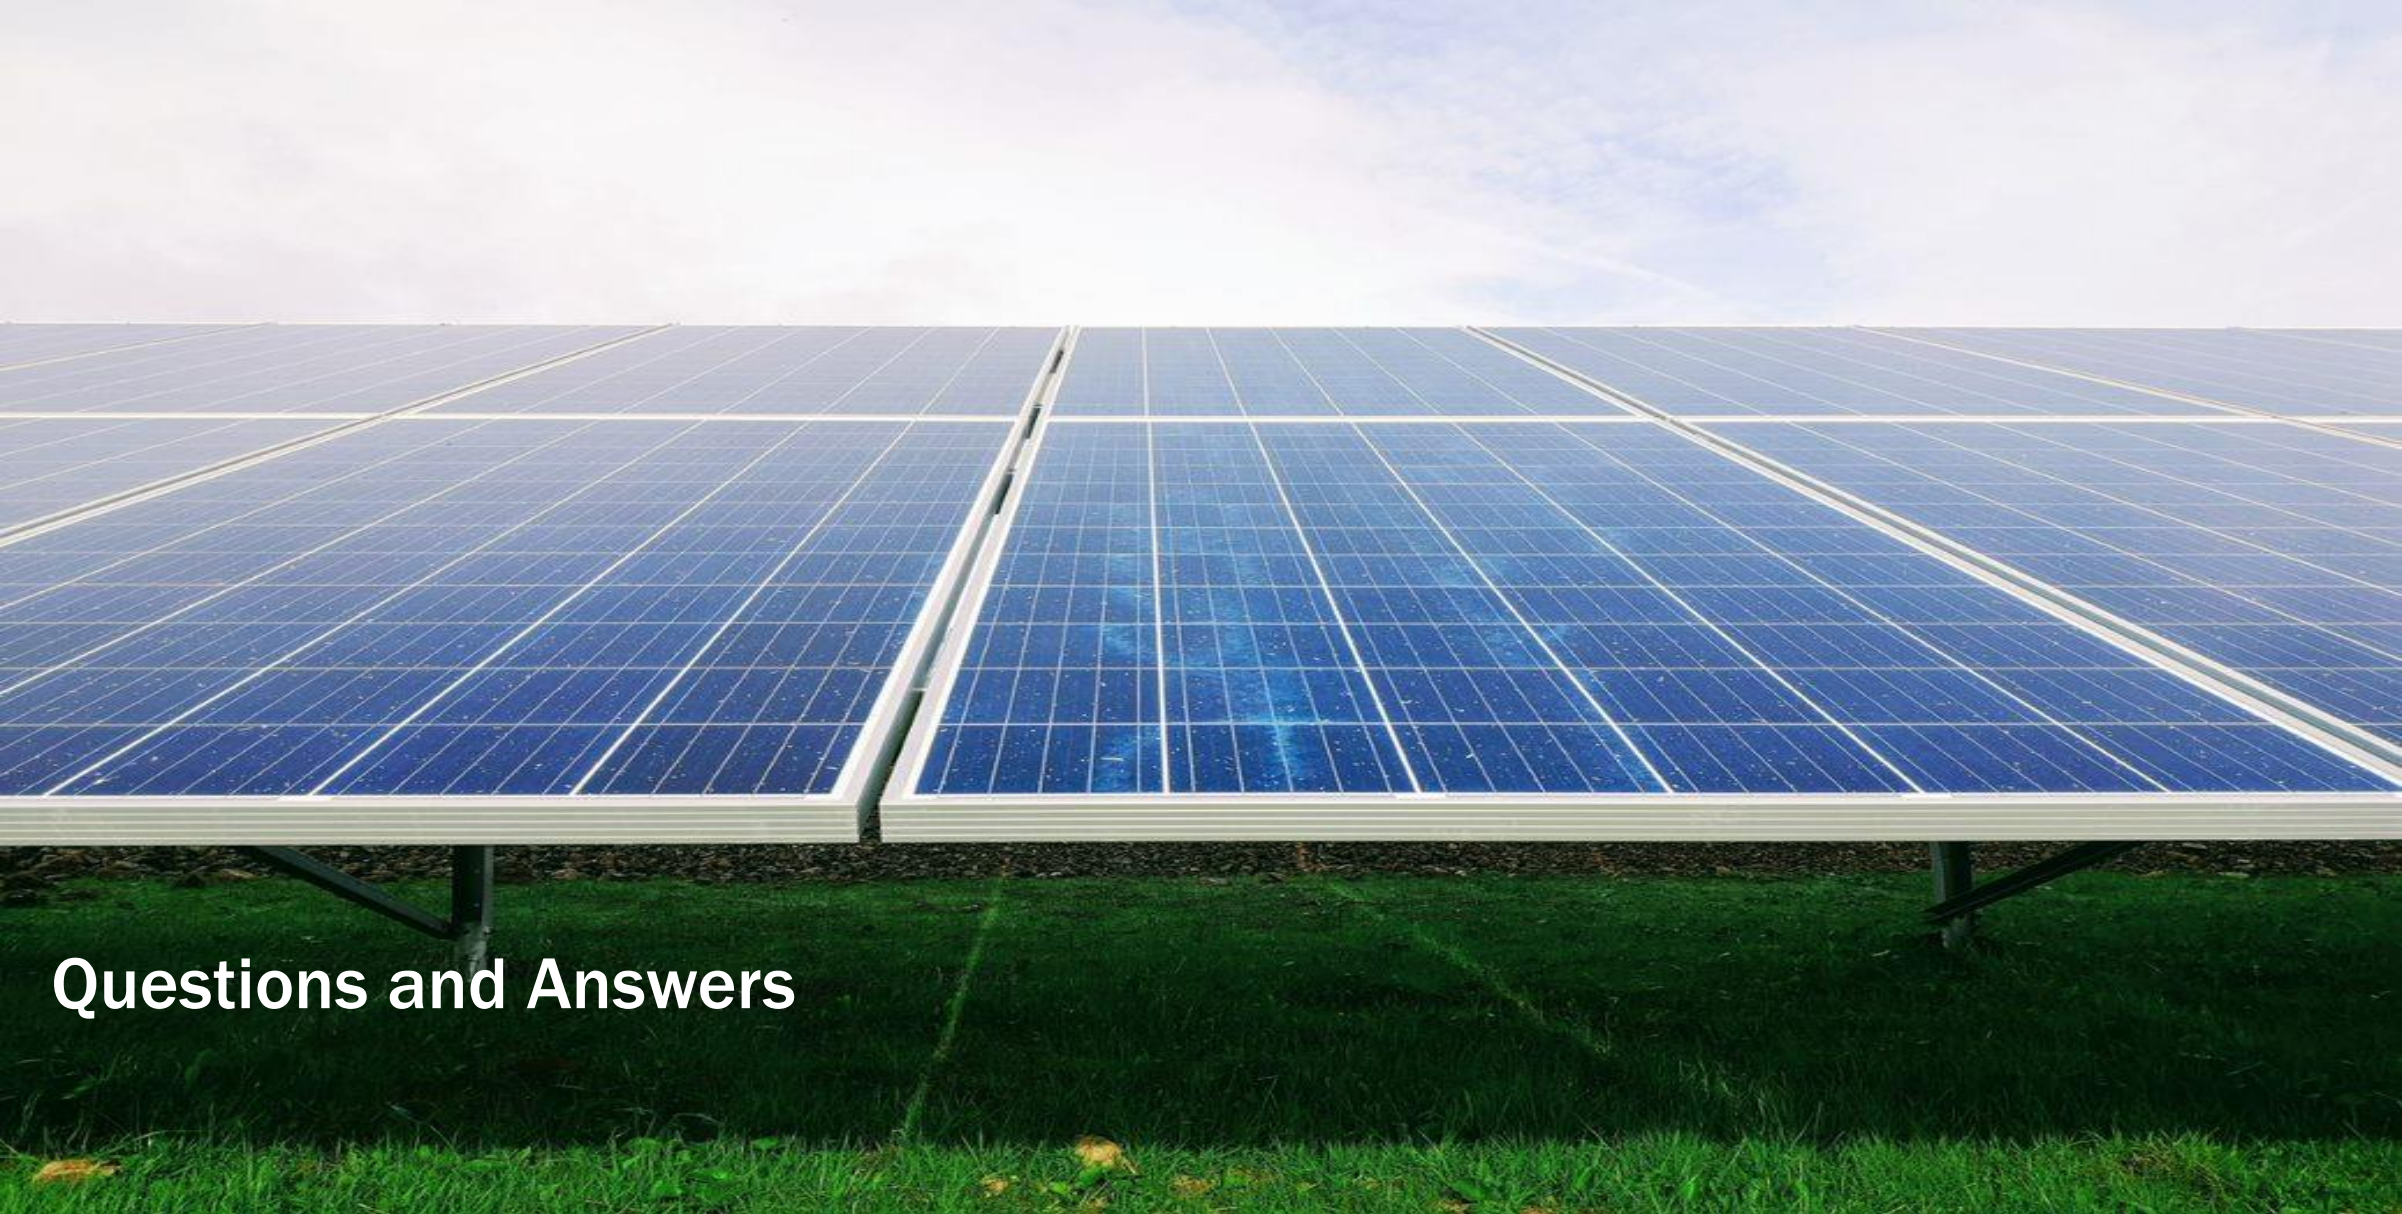

Projects that did not get selected and did not make it onto the waitlist (minimum 5 points required) can reapply to the Program at any time.

Approved Vendors can swap projects that were selected with projects that were not selected/waitlisted, as long as they have same score and are the same size.

Projects submitted after November 1, 2022 will be prioritized and processed in the order received.

Questions and Answers
