# Introduction

Projects for the 2023-24 Program Year will be selected until the available capacity for Group B (48.87 MW) is filled.\*

Random selection will be used to break tied scores in Group B for projects submitted June 1, 2023, using the entire project list. There are no tied scores for Group A projects submitted June 1, 2023.

A 20% developer cap will be applied to this year's capacity and will reset for the 2024-25 Program Year.

\*Includes 13.19 MW of reallocated capacity from withdrawn TCS Group B projects

# Overview of Random Selection Process

- **Why use a command-line script to generate random tiebreaker numbers?**

- **How does the random number generator script work?**

# Project Selection

# Next Steps

Recording of this event will be up in the next 24 hours along with a communication of the results.

Selected projects will be submitted to the next 1-2 ICC meetings. The next eligible meetings are October 19th and November 2nd.

The waitlist will be published to the Illinois Shines website on the Project Category Hub, under the Traditional Community Solar section.

# Next Steps

Projects that did not get selected and did not make it onto the waitlist (minimum 5 points required) can reapply to the Program at any time.

Approved Vendors can swap projects that were selected with projects that were not selected/waitlisted, as long as they have same score and are the same size.

Projects submitted after June 1, 2023 will be prioritized and processed in the order received.

# Questions and Answers

# Thank you!
